

GitHub Projects v2 Setup Guide: Incident Command Board

Prepared by CTech Data Engineers for GitHub Org Admins & Data Leads

1. Board Status Columns Configuration

Set up 4 columns in GitHub Projects (v2) Board:

Column Name	Color	Triggering Event in FlowSentinel AI
 Incident Triaged	Red	Gemini 2.0 intercepts failure log & posts GitHub Issue #42.
 PR Drafted (Awaiting Approval)	Yellow	Code Repair Agent opens GitHub PR #142 with SQL schema fix.
 Backfill Scheduled	Blue	Backfill Agent calculates partition blast radius & compute cost.
 Resolved & Closed	Green	Engineer approves PR on Dashboard, PR merges, & backfill runs.

2. Custom Metadata Fields Configuration

Add the following 4 custom fields to your GitHub Projects v2 board header:

Field Name	Field Type	Configuration Options	Example Value
Incident Severity	Single Select	P1 – Critical, P2 – High, P3 – Moderate	P1 – Critical
Pipeline Name	Text	Plain text string	sales_transformation_pipeline
Fault Line	Text	Code file & line number	stg_orders.sql:L42
Est. Backfill Cost (\$)	Number	Decimal number	1.20

3. Workflows & Automation Rules

- **Auto-add to project:** Filter `label:incident` (Adds Gemini 2.0 tickets to  Incident Triaged).
- **PR Merged:** Automatically moves item to  Resolved & Closed when PR merges into `main`.
- **Linked Repository:** Link `ctech-flowsentinel-demo` under Project Settings → Linked Repositories.

4. User Management & Access Control Guide

Where & How to Add Users:

1. **GitHub Repository Access:** Go to Repo Settings → Collaborators → Click **Add people**. Assign `Write` role for engineers, `Read` for viewers.
2. **GitHub Projects Board Access:** Go to Project Board → Click **...** → **Manage access** → Click **Add collaborators**. Assign `Editor` role.
3. **GCP Infrastructure Access:** Go to GCP Console → IAM & Admin → Click **GRANT ACCESS**. Add user emails with `Cloud Composer User`, `BigQuery Data Editor`, and `Storage Object Admin` roles.

GitHub Admin Checklist:

- ☐ Create GitHub Project: FlowSentinel AI – Incident & Backfill Command Board
- ☐ Configure 4 Status columns (Triaged → PR Drafted → Backfill → Resolved)
- ☐ Add 4 Custom Fields (Severity, Pipeline Name, Fault Line, Cost)
- ☐ Add project users under Repo → Collaborators & Project → Manage access
